Urban District Council of Cockermouth

ANNUAL REPORTS

of the

Medical Officer of Health

and the

Public Health Inspector

for the year

1961

Digitized by the Internet Archive in 2017 with funding from Wellcome Library

Cockermouth Urban District Council

To the Chairman and Members of the Cockermouth Urban District Council.

Mr. Chairman and Gentlemen,

I have the honour to submit my Eighth Annual Report as Medical Officer of Health to the Cockermouth Urban District Council.

Again the gap between the number of births and the number of deaths widens, the birth rate rising and the death rate falling.

Still births plus deaths in the first week of life together form what are called perinatal deaths and generally, all over the nation, this rate lags behind all other rates in falling, e.g. tuberculosis, maternal mortality etc. This rate indicates the care generally given ante-natally, post-natally, and during the confinement of the mother, plus, of course, the state of her health during pregnancy. This perinatal mortality rate for 1961 was 19.4 per thousand and is good compared with the national rate of 32.2 per thousand live and still births.

These facts point to the problems ahead, in educational provision for the rising number of children, and the specialised housing requirements for an ageing population.

The second part of this report has been prepared by Mr. Pattison, and shows the work undertaken and efficiently carried out by his department during the year.

I would record my appreciation of the co-operation and help which I have received from him at all times and would express my thanks for the help given me by the Clerk and his staff and the continued kindness and helpfulness of the members of the Council.

I am,

Mr. Chairman and Gentlemen, Your obedient servant,

JOHN PATTERSON,

Medical Officer of Health.

PUBLIC HEALTH STAFF.

0----

MEDICAL OFFICER OF HEALTH:
J. PATTERSON, M.B., B.Ch., B.A.O., D.P.H.

PUBLIC HEALTH INSPECTOR:
J. J. PATTISON, M.R.S.H., M.A.P.H.I., Cert. S.I.B.

COCKERMOUTH URBAN DISTRICT COUNCIL

ANNUAL REPORT

OF THE MEDICAL OFFICER OF HEALTH

For the Year 1961,

	Total		36.99

POPULATION.

The population figure of 5,810 is given for the year 1961 by the Registrar General and called by him the "Home Population". On this figure the birth and death rates and the incidence of notifiable diseases are based.

The population figure for 1960 was 5.560

CHIEF OCCUPATIONS OF THE INHABITANTS.

Cockermouth is an old market town (its Royal Charter having been granted in the year 1221). For many years Saw-Mills, Building Contractors, a Brewery and the Railway have employed a considerable number of persons (mainly male) and since 1939 five new works of employment were commenced; one of these, a Blood Manure factory has ceased; the other four are made up of a Shoe and Slipper factory, a Clothing factory, a light Engineering works and a Precast Concrete works, employing altogether over 1,100 persons including a large number of female labour, particularly at the two first-named which also have workers from outside the Urban area. There are as well, of course, those individuals absorbed by the usual businesses and trades of a small country town. A few find employment about the large cattle Mart, whilst a few are engaged in agriculture, and in coal mines, quarries and steelworks outside the district.

STATISTICS.

The Tables of vital statistics are set out below showing birth rates, death rates and rates for maternal and infantile mortality.

Crude birth and death rates are corrected by means of an Area Comparability Factor supplied each year by the Registrar General. They allow for varying age and sex distribution of the population in different areas and enable comparisons to be made with figures for other areas.

This year the factor for births is 0.99 and for deaths 1.05.

The total of live births was 103. This is only the fifth time since records were kept that the number of live births has passed the century, the other years being 1920, 1921, 1946 and 1947. This gives a birth rate of 18.4 per thousand of the population (18.2 corrected) compared with 98 births (rate 17.3, 17.8 corrected) in 1930. Two of the births were illegitimate.

There were no still births during the year, but there were 2 deaths of infants under 1 year of age. Both these deaths occurred in the first week of life, one being due to a congenital malformation of the brain and spinal column, and the other being due to prematurity.

The number of deaths at all ages was 63, giving a death rate of 10.8 per thousand of the population, compared with 14.0 for 1960. This was a decrease of ten deaths in males and five in females.

There were no maternal deaths during the year, nor deaths from tuberculosis.

Cancer deaths fell again to 7, one of these being due to cancer of the lung.

Vital Statistics.

Population of the Urban District is 5.810,

CANCER DEATH RATE 1.2 per 1,000 population (1960—2.2 per 1,000 of population).

Approximately one death in nine was due to Caneer.

INFECTIOUS DISEASE.

The total number of cases of Infectious Disease notified in 1961 was 25. Excluding Measles and Whooping Cough the number was 8.

There were no notifications or deaths from Diphtheria, Polio-

myelitis, Typhoid or Puerperal Pyrexia.

There were 6 notifications of Dysentery. This is a welcome decrease in the number of cases of Dysentery compared with previous years.

There were no deaths from Tuberculosis and no new Pulmonary

cases were notified.

Two cases of Food Poisoning were investigated with negative results.

	47	8

Modern methods of dealing with an outbreak of smallpox do not call for mass vaccination nor do they require a 75% vaccination rate in the area, although this is always a help.

The ring system involves vaccination and observation of all contacts of the first cases, and also of a secondary ring, of contacts of the first ring of contacts. This method protects the community as a whole.

For personal protection, if a person happens to be a contact, vaccination must be performed very early on during the incubation period, and it is here that previous vaccination is valuable.

Immunity from a primary vaccination takes ten days, whereas to obtain immunity from a revaccination it will only take three to five days, and with an incubation period of twelve days it will be seen that revaccination gives more time for full immunity to develop.

Consequently small pox vaccination is advised for personal safety.

There are certain things which should be stressed about

vaccination against smallpox.

There are certain ages where the risk of complications arising from primary vaccination are diminished, such as infancy, as opposed to adult years. The safest age would appear to be from 1 to 2 years, whereas the 5—12 years age group is not suitable. As with all drugs, proper selection of cases for vaccination is important, only those in good health being given vaccine. To those with skin diseases, severe or chronic illness, debility, pregnancy, etc..

and those receiving certain other drugs at the time, vacculation is contra-indicated. If these types of people are in contact with a case of smallpox, then the risks have to be balanced and the lesser risk taken.

In conclusion, it is recommended that primary vaccination of

healthy infants is still a very worthwhile procedure.

DIPHTHERIA.

The figures in the table show the number of diphtheria immunisations performed during the year, both primary courses and booster doses,

In all, 147 children completed a primary course and 57 had

booster doses.

The number of children adequately protected against this disease (i.e. have had a primary course or been boosted in the last

5 years) is now 1,666.

The majority of these primary injections also include immunisation against whooping cough in the pre-five year olds, and against tetanus at all ages.

POLIOMYELITIS.

The figures show those having had 2 injections of Salk vaccine, those having completed a course of three, and a selected age group of all school children thought to be at special risk between the ages of 6 and 12 years.

The total number of persons who have completed an immunisa-

tion course has risen from 1.561 in 1960 to 1.828 in 1961.

At the time of writing this report all booster doses of previous Salk courses and all new primary courses are with the oral Sabin vaccine.

This means that the pre-school and school population is about 90% protected and the figure for adults up to 40 years of age is

about 35%.

B.C.G. TUBERCULOSIS.

Mantoux skin testing and B.C.G. vaccination was continued in 1961, the age group being those born in 1947. The table gives

detailed figures.

Of 193 consents given (92% consent rate) all but 15 were tested and 50 (25%) were found to be positive reactors. The remaining 133 negatives were given B.C.G. vaccination. This figure of 25% for positive reactors is much the same as in previous years, although in most other areas of Cumberland the figure shows a steady fall over the past six years.

Of the five children with unsatisfactory chest X-rays, three had calcified primary complexes i.e. had had infection and overcome it naturally, one had collapse of part of a lung, and one had

bronchiectasis.

ANNUAL REPORT

OF THE PUBLIC HEALTH INSPECTOR AND SURVEYOR,

J. J. PATTISON, M.R.S.H., M.A.P.H.I., CERT.S.I.B.

For the Year 1961.

To the Chairman and Members of the COCKERMOUTH URBAN DISTRICT COUNCIL.

Mr. Chairman and Gentlemen,

I have pleasure in submitting my fourth Annual Report to the Council, for the year 1961.

Time does not permit a lengthy or greatly detailed account of the activities of the year but much important work has been done in the spheres of housing, street lighting and sewerage, apart from normal day to day matters.

Finally I express my appreciation of the ready co-operation and encouragement given to me at all times by Dr. Patterson, the Clerk and his Staff, and the valuable assistance rendered by my part-time clerical assistant, Mrs. K. Nairn, and the Works Foreman, Mr. C. Wilson.

Jam,

Your Obedient Servant,

J. J. PATTISON,

Public Health Inspector and Surveyor.

WATER SUPPLY

The method of obtaining water by bulk supply from the trunk main from Crummock continued as before, but the Council's water undertaking became the property of the West Cumberland Water Board on April 1st. The total amount abstracted during the year into the Moor reservoir was 95,318,000 gallons, equivalent to an average daily consumption per head of 45 gallons. This figure includes trade supplies which account for approximately 10% of the consumption. Treatment of the lake water continued as set out in the 1955 report. The Water Board and my department continued sampling for bacteriological analysis and received consistently good reports from the Cumberland Pathological Laboratory. The amount supplied to the high level areas of the town via the Sunscales reservoir averaged 83,342 gallons per day which was 32% of the total consumption.

Only 5 properties in the area have private water supplies.

DRAINAGE AND SEWERAGE

The sewage disposal works continued to function satisfactorily but rebuilding of the retaining walls of the filters, which were showing signs of collapse, has had to be continued. Rebuilding and redraining of the sludge drying beds is also being carried out.

With the exception of 41 houses, which have private scwage disposal works, all properties in the district are connected to public

sewers.

REFUSE REMOVAL

There is a weekly collection of refuse in all parts of the town. Trade refuse is also collected. Refuse is disposed of by controlled tipping at the Lorton Road refuse tip where, despite a shortage of covering materials at times, the refuse has been mostly kept covered.

FACTORIES ACTS, 1937 to 1959.

There are 44 factorics registered in	the area as	follows :
Business	Powered	Non-Powered
Engineering	2	
Shoe Manufacturing	2	
Clothing Manufacturing	1	
Baking	4	7
Joinery	5	
Joinery and Sawmilling	2	
Concrete Products	1	
Printing	3	
Gas Storage	1	
Tanning		1
Brewing	1	
Motor Vehicle Repairs	6	1
Agricultural Machinery Repairs	1	
Panel Beating	1	
Slaughterhouses		3
Building Sites	2	

The following table shows the position under the Factories Acts, 1937 to 1959, in this district at the end of 1961:—

CAUSES OF CONDEMNATION.

BULLOCKS: 15 Cirrhosis of Livers.

4 Abscesses of Livers, 1 Abscesses of Lungs,

HEIFERS: 1 Abseesses of Lungs.

1 Bruising of Leg.
47 Cirrhosis of Livers.
2 Abscesses of Livers.

1 Abscesses of Lungs, Liver and Skirt.

SHEEP: 40 Strongylosis of Lungs.

6 Cirrhosis of Livers.

2 Careases Unbled and Unset.

PIGS: 1 Tuberculosis of Head.

1 Septicaemia.

4 Slaughtermen are licensed in the district.

HOUSING.

6 Houses were completed at The Green, Melbreak Avenue, during the year by the Council and 35 were erected by private owners. The building of 36 houses at Pinfold Close was commenced by the Council.

During the past 17 years 379 ('ouncil and 216 private houses have been built in the district.

A great deal of work was done to further slum clearance and representations of unfitness were made in regard to 27 houses in Derwent Street, resulting in a Clearance Area being declared in respect of which a Clearance Order was made.

In addition, a further 25 representations were made in respect of individual unfit houses, resulting in the Council deciding to make 25 Closing Orders.

5 houses in old Clearance Areas were demolished,

HOUSING APPENDIX.

STATISTICS.

1	Inspection of Dwellinghouses during the year :-	
	(1) (a) Total number of dwelling-houses inspected for housing defects (under Public Health and Housing Acts)	229
	(b) Number of inspections made for the purpose (2) (a) Number of dwelling-houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidaation Regulations 1925 and 1932)	331
	 (b) Number of inspections made for the purpose (3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation 	52
	(4) Number of dwelling-houses (exclusive of those referred to under the preceding sub-heading) found not to be in all respects reasonably fit for human habitation.	62
2.	Remedy of Defects during the year without service of formal Notices:—	
	Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their Officers	59
